The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gernological Institute (ISL). A laboratory grown diamond is one that has essentially the same chemical, physical and optical proporties as a mined diamond, with the exception of being grown by man (a manufactured product). (B.I. employs and utilizes those techniques and equipment currently available to IGL, including, without limitation, 10% magnification, corrected triplet foliage, binedular microscope, master color comparison stones, non-contact-optical measuring device, Diamond Size**, Diamond View**, Specification between contact-optical measuring analog processes as deemed appropriate by (Ed. This Report includes adapted to the importance of and interrelationship between cut, color, clatify and caratively.)
